EDUCATION

Bachelor of Economics (First-Class Honors)

Kasetsart University, Sriracha

2018 – 2022

CORE SKILLS

Economics

Macroeconomics · Monetary Economics
Game Theory · Behavioural Economics
Systemic Risk Assessment

Digital & FinTech

DeFi · Tokenomics · CBDC
On-Chain Data · Blockchain Security
Digital Asset Valuation

Tech & AI

AI Research & Automation
Prompt Engineering
TypeScript · Node.js

LANGUAGES

Thai — Native

English — CEFR B2 (TOEIC 855)

AVAILABILITY

Available immediately upon request

PROFESSIONAL SUMMARY

First-Class Honours graduate in Economics with strong foundations in macroeconomic theory, monetary economics, and quantitative analysis. With over five years of applied experience in digital asset markets and decentralised finance, I bridge traditional economic frameworks with emerging financial technologies, focusing on macroeconomic research, financial stability analysis, and evidence-based monetary policy.

PROFESSIONAL EXPERIENCE

Independent Digital Asset Analyst & Researcher

2023 – Present

Independent Researcher – Digital Assets & Decentralised Finance

- Conducted thorough fundamental analysis of DeFi protocols, assessing VC funding rounds, tokenomics structures, systemic liquidity risks, and real-world economic viability of each project.
- Deployed and maintained blockchain validator, storage, and data nodes for OG Labs, a decentralised AI infrastructure project backed by over \$350M in funding, to study consensus mechanisms, data availability layers, and on-chain infrastructure through direct hands-on operation.
- Utilised AI-assisted scripting tools to automate on-chain transactions and test operational workflows, significantly enhancing research and operational efficiency.
- Investigated and mitigated on-chain wallet vulnerabilities, including recovery of digital assets from sweeper-bot attacks; demonstrated strong understanding of scammer methodologies across multiple attack vectors.
- Applied game theory and incentive mechanism analysis to evaluate user participation structures within early-stage Web3 ecosystems.
- Monitored macroeconomic developments (monetary policy shifts, interest rate cycles, and geopolitical risk) and assessed their impact on global asset markets.

Applied Economics Researcher (Digital Assets Focus)

2020 – 2022

Academic Research | Kasetsart University, Sriracha

- Actively engaged with cryptocurrency, NFT, and GameFi ecosystems, applying macro and microeconomic frameworks to evaluate market structure and asset valuation.
- Analysed the relationship between macroeconomic variables (interest rate policy, inflation expectations) and cryptocurrency market cycles during the high-volatility period of 2020–2022.

KEY HIGHLIGHTS

- Academic Excellence: First-Class Honours in Economics (rigorous command of quantitative methods directly applicable to monetary policy research and financial stability analysis).
- Applied Market Research: Five years of continuous hands-on engagement with global financial markets, combining academic rigour with analysis of capital flows, risk assessment, and digital asset ecosystems.
- On-Chain Security & Risk: Demonstrated expertise identifying and countering on-chain threats, including successful recovery of compromised digital assets (reflecting strong financial risk management capabilities).
- AI Integration: Over two years of applied experience integrating AI tools into research and analytical workflows, enhancing productivity and data accuracy.
- Bilingual Proficiency: Advanced English communication skills (CEFR B2 / TOEIC 855) effective for engagement with international research, policy documentation, and cross-functional collaboration.
